Opposition to the Puente Power Plant Proposal

As a lifelong resident of Oxnard growing up in a Latino union family, I grew up wondering why power plants were built along our beaches in Oxnard. Through life, I learned of the purposes of economic demand for energy, and the science of how to produce it. That is why I am currently opposed of building this new power plant along Oxnard's coast when there is no demand for new energy and companies continue to build more when they are guaranteed a profit. Especially when the science of alternative energy exists for solar fields in the Santa Clara Valley to power Ventura and Los Angeles Counties.
