No Puente power plant

My father was a nuclear engineer for his entire adult life working for Atomics International & North American Rockwell. I remember a conversation we had one evening when I was in high school & concerned about environmental issues & I asked him about nuclear power. Standing in our kitchen way back in the 1970's he told me that while nuclear power was an efficient source of energy it came at such a high price on the environment. There is no real solution to handle the waste & the potential dangers are so high. He was very much in favor of the development of alternative energy but felt that it would never be developed to the scale to deliver power to masses of populations.

That was over 40 years ago & though much progress has been made in developing alternative forms of energy government & corporations seem stuck in antiquated thought.

Please stretch your brilliant minds & break away from old, outdated energy solutions & create a non polluting alternative energy solution that will provide more jobs in an environmentally friendly manner. You will create such good will & improved public image & relationships that you can be far more proud of.

Thank you, Clare Mccarty
