Docket Number: 15-AFC-01

Protect our Coastal Zone (NO Power Plants)

We don't need more power plants on the Beach in Ventura County. California already has a surplus of power, and many existing power plants are being closed in recognition of this. California is on track to produce at least 21% more electricity than it needs by 2020-- more than enough to cover us reliably in case of emergencies" plus electricity produced by solar panels. We are absorbing the costs for the building and maintenance of new unneeded plants" essentially paying for this surplus of un-needed power at a very high premium.
