Solar, not gas burning

Our state needs a solar NEM program that reflects time of use and more hydro energy storage plants. It does NOT need another gas-fired plant. We saw the tragedy of Aliso Canyon; we don't need more gas burning here. We need to stop burning fossil fuels. As a coastal state, we will be most tragically hit with rising sea levels. We need to set an example to the rest of the country. If Western European countries can go towards 100% renewal energy, why can't sunny California? It seriously makes me wonder who is accepting money for short-term gain.
