opposition to building the Puente Power Plant

I am opposed to building the Puente Power Plant, which is proposed by the NRG to replace a power plant in Oxnard. California does not need another power plant that will increase greenhouse gasses and air pollution. Rather, it needs to invest in creating more clean energy sources. If every public building in the state will have solar panels in its roof, the state will not only generate more power than the proposed power plant but also reduce environmental problems.
