Opposition to the Puente Power Plant

I am opposed to the Puente Power Plant proposal and have spoken about it. I am glad to see that Commission is working hard to make a right decision not only for the Oxnard community that has suffered for decades from existing power plants, but also for the future generation and ecology of the planet. The NRG presents that the plant will "bridge" to clean energy for the future, but in matter of fact, we do not need a "bridge." We need now a clean energy solution and we already have technology and resources to do so. We just need our willingness and the commission can make a good example for it by rejecting this proposal.
