Support Puente more energy

I am an apprentice ironworker for local 433. I wanted to support this project because it is local work and is important to stay close to home and family. This project is also good for the state because the work stays in California and the money stays in California and back into the cycle of the California economy. This plant will also take the place of two old plants so two for the price of one. This will also provide safe and reliable power for the community which we all know is crucial in California.
