Stop building more dirty power plants and go GREEN!

California is being forced to pay for power plants it does not need, including a 10% profit to the company. STOP investing in dirty energy and START playing hard ball with power companies to allow for off-grid options. They need to evolve with the times, rather than keep us chained to old ways that pollute, lower quality of life, health and educational attainment. This should be a no-brainer, except for all the money interests that keep clouding the issues. Please do the right thing for Californians and not the 1% new version of robber barrons.
