RE: Opposition to the Puente Power Project (Docket No. 15-AFC-01)

Dear Commissioners:

We're writing to express our deep concerns about the proposal to build a fourth power plant in Oxnard, California. With asthma rates higher than 90% of California communities, Oxnard needs clean air now, not a fourth polluting power plant.

I demand that the Energy Commission reject this polluting power plant in Oxnard and explore all feasible alternatives and mitigation measures through a legitimate public process, as mandated under the California Environmental Quality Act (CEQA).

Respectfully,

As an environmental health advocate, it is deeply concerning to see California deviating from a clean energy path and simultaneously ignoring the plight of environmental justice communities. I strongly urge the Energy Commission to reject the Oxnard power

I agree with Senator Henry Stern (D-Canoga Park) when he stated, "In light of new technological advances in clean energy, storage and efficiency, mounting environmental safety concerns and looming ratepayer risks," Stern said, "we need to step back

I also understand that state wide there is a glut of similar natural gas fueled combined cycle power plants. Why can't SCE contract for some of the existing and under utilized energy. The rate payers could use some relief.

This looks like a bad idea.

Energy from sun, wind, water, methane gas from composting matter, we have clean alternative options; people are waking up to the fact that dependence on fossil fuels is detrimental for our society, for our whole world and a lie that we need it.

Please approve solar, wind, and geothermal plants to reduce greenhouse gases and improve the health of all Californians.

My daughter and here family are residents of Oxnard. I have two grandson aged 7 & 10 who could be exposed to pollutants daily. Is the risk of their health over their lifetime less important than this power plant? What about their neighbors, friends and

Ever heard of solar power? There is plenty of sunshine in California. Or is money more important to you than your neighbors and their children? Why do we have to tell you the obvious? Please stop this.

Don't we already have a bunch of power plants not running at capacity? We're paying more for energy, and not even using what we've built!

All new electricity should come from renewable sources, primarily from wind and solar. To add new a gas-fired plant now would be a big step backwards.

We have not time to waste on old, dirty, technology. We need to move to sustainable energy now!

California should be focusing on cleaner ways to generate energy, such as solar. I think that there should be solar panels on the top of every shopping center and office building.

Please look to clean energy. There is way too much pollution in our air. Renewable energy is available and will keep our country clean for our children, grandchildren and the animals. THANK YOU

Who's side are you on, the people, or big money? Please reject the Puente Power Plant. Thank You!...bob abbott

Pollution causes health problems for Americans. Ensuring American's have healthy air to breath is economically beneficial to all!

I don't like the Sierra Club language much, but please don't build a non-sustainable power plant in Oxnard.

The building of such a power plant is a huge step backward of the demand and production of clean , safe energy. I am truly shocked at the assumption that such a building should be built near a low income community.....
