## **Positive Aspects**

Realistically I'm trying to understand why there is so much argument against this project from the vocal minority. Let me please point out some of the positives about the new plant:

1. A reduction in pollution from the existing plant.
  2. A reduction in visual pollution for the existing plant
  3. A benefit for all the citizens in Oxnard providing uninterrupted electrical power.
  4. Economic boost to the local area during construction.
  5. A major economic boost to the tax revenue for the City of Oxnard. It may be as high as \$4 million per year.
  6. As it's an enclosure, secure fenced in area; it has the positive effect on endangered species protection. Environmental should love this since it protects endangered species from being trampled on by the public.
- I could go on but you wouldn't think it would be necessary since it has so many positive aspects.

I appreciate being able to add input.

Please feel free to contact me if you need any further information.

Charles W. McLaughlin,

Oxnard Business Owner and Resident.
