Distributed Gen in Industrial Corridor with Industry Conservation Takes Care of Moorpark Subarea

Distribution generation and battery storage are not topics in your drop down menu. What is wrong with your priorities? Those are the two main ways to cost-effectively resolve the "reliability" issue claimed by SCE and NRG to justify another big power plant. Oxnard and Camarillo have industrial corridors with huge rooftops and parking lots. They use a LOT of electricity. We want those businesses organized and incentivized to install solar and batteries and drill down on their conservation. If you build another gas-fired peaker, you are cheating West Ventura County out of the chance to have 100% clean energy by 2035. You are destroying our capacity to be in solidarity with the Paris Climate Accord. You want to destroy our imminent CCA capacity to develop clean energy options that SCE could have done and has chosen instead to obstruct. You want to destroy the best part of CCA which is democratic local control. We do not want or need electricity made from natural gas. You must support the CA ISO's offer to review the demand forecast based on an abundance of new potential technology and patterns of conservation.
