Oxnard

We in Oxnard need you to stop this power plant and give us alternative energy. An article in today's Ventura County Star by Tom Elias again brought up the fact that the electric company as well as the gas company warn that more is needed in the way of energy and then he went on to show graphically that it is a ruse. This is not true. When they do have an outage from time to time, they say it is equipment failure, not lack of an energy source. They have equipment failures, in my estimation, because they charge us more and more and then don't use any of it or much of it to fix their infrastructure. They are more about stockholders' profits than about the citizens. Just as it came out afterward, when they tried to foist LNG on Oxnard, it wasn't needed, this also is not needed so please squash this project now. Help us improve our air quality, not go backwards. Thank you for taking time to read this.
