Dear Submit your public comment,

Please Reject the idea of a new gas fired plant and instead put the money into renewable energy to help us meet statewide goals.

We know that burning natural gas releases carcinogens that are much more dangerous than burning coal or oil. So please do not spend 250 million dollars to create a public health crisis and create another zone of cancer that will cut peoples lives short in the most horrific way.

And please help to preserve what little remains of our coastal ecosystem in Southern California, this area should be a park and not another industrial site.

We know that renewable energy created the first day in history where the cost of electricity went below zero, please support the abundant and healthy energy for all of California.

Thank you

John

Sincerely, John DeGolyer
