Reject the Puente Power Project

Dear Submit your public comment,

This power plant is not needed to secure reliability of the electric grid. Clean energy alternatives can do the job at much lower cost. This plant takes the state in the wrong direction on climate pollution and smog pollutants. The people living near the site are strongly against this proposal.

California should be moving to phase down, over several decades, the use of gas to generate power. We should be shrinking our dependence on gas not increasing it.

There is nothing natural about gas. It is an extremely powerful greenhouse gas that is leaked into the atmosphere throughout the gas fuel cycle. The state should begin a strong program of electrification of building heating, cooling and water heating. It will take decades to do this and we need to start now.

David Wooley
