Reject the Puente Power Project

Dear Submit your public comment,

You must reject the Puente Power Project.

This project would be another terrible source of pollution and we sure don't need that.

We all need your help because POLLUTION IS KILLING US.

More pollution is made in the USA, per person, than in any other nation and it adds to the world's total. All that pollution is killing millions of people every year and it makes a whole lot more sick. India and China get it the worst. We can't stop making pollution without nuclear power. I will show you with simple math. Everything called renewables can't cut it. The new generation-IV molten salt nuclear reactors are so safe that there is almost no comparison.

Nuclear plant accidents have killed far less people than fossil fuels have. Let's keep as many of the world's nuclear reactors running, as we can safely, to make time for getting the much safer and economical molten salt reactors on-line. Thousands of people, who really understand, are working hard to get the new generation-IV molten salt nuclear reactors running throughout the world. Projects are in the works in lots of countries right now.

Wind-farms and solar-farms can produce only a tiny portion of our electric power needs; they can't replace fossil fuels, but nuclear power can. Wind-farms and solar-farms produce electricity much less than half the time. Thus, we are forced to use other energy sources and/or energy storage the most of the time. Hydro storage and battery storage can't fill the gaps.

It is one thing to be a climate-change denier but it is another thing to stand by and let pollution slowly kill us off. We absolutely must do something about it. I provided some web sites to help you get started. Let's stop the pollution by getting the world running on the new generation-IV molten salt nuclear reactors and let's work towards leaving the rest of the fossil fuels in the ground forever. I address climate-change and global-dimming too.

Here is the information and math that I promised you:
