Reject the Puente Power Project

Dear Submit your public comment,

The Puente Power Plant will be powered by Natural Gas which is primarily Methane an 80+ times more potent Greenhouse Gas than Carbon Dioxide.

This is all you need to know to make a decision as there is no such thing as Zero leaking of Methane from getting it out of the ground, transporting it to the plant and using it to generate steam.

The construction of this plant will cost double the price of renewable energy generation and create far fewer permanent jobs.

This project is strictly so a few people at the top of the Fossil Fuel industry can make millions personally and has nothing to do with energy independence or energy generation for the public.

Sincerely, Richard Elam
