Proposal 4th power plant in Oxnard

Please consider placing solar or wind alternatives to your proposed gas fired plant. The developer did not disclose that there are endangered birds amid the fragile ecosystem of sand dunes. Also if it this close to the ocean, most likely it will be affected by flooding that will occur with global warming advancing the rise in sea levels. What a bad idea. We must start thinking of the future, including the young children already affected by asthma that comes along with these types of power sources.

Please now is the time we, as a culture, must think further into the future instead of what is economically beneficial in the short term.

Thank you.
