Docket Number: 15-AFC-01

No PPP, Yes EJ

Extensive research demonstrates that the Puente Power Project will be both a threat to public health and to the environment. Furthermore the CAISO study (as well as numerous other studies and examples from around the country and across the globe) shows that alternative, renewable energy sources can provide the same energy benefits to our community and state.

Therefore with respect for the Commission's independence from narrow corporate influence and commitment to scientific and technical integrity, I urge the Energy Commission to REJECT the proposed PPP and to support clean and future-oriented renewable alternatives instead.

Thank you,

Howard Winant
