Alternative to No Puente Power Plant

I strongly urge the CEC to reject the Puente Power Plant by accepting the 2017 study by the California Independent Systems Operator (CAISO). As the study recommends, there are alternatives that are not only environmentally safer but also less costly in the long run. I appreciate the CEC for having taken time to find a better way to create clean energy for all Californians and establish some justice for Oxnard community members who have suffered enough from existing energy plants. Now it is time to make a right decision by turning down the Puente Power Plant project.
