Puente Power Plant

I urge the commission to deny the NRG Energy bid to build another power plant in Oxnard. It is clear that alternative energy is more reliable, will not destroy the environment and will be more affordable. People in Oxnard and all people on the planet should not have to be put at even greater risk to our health and safety so that these fossil fuel industries can remain in business. IT is time to move FORWARD and make progress in keeping California a leader in environmental stewardship. Please don't be tone deaf to the needs and rights of people, not corporations! Likely everyone on the commission has children, grandchildren or people that they love. Protect their future and be part of the solution, not part of the problem.
