No on Puente Power Plant

"Each snowflake in an avalanche pleads 'not guilty'," and the Puente Power Plant is just one more snow-fall adding to an already heavily freighted mountainside. This electric generation unit is a fossil fuel-fired power plant that will continue to increase greenhouse gas emissions and methane outgassing from extraction, distribution and delivery leaks. It moves California in the wrong direction, contributing to annual lethal invoices of more hurricane Harveys, Irmas, floods, droughts and costly carbon-discharging wildfires that handcuff economic growth and prosperity. Investing in Puente instead of shifting those dollars to invest in energy efficiency and clean power, collides with the urgently needed early achievement of California's aggressive 2050 clean energy objectives and the healthier economic rewards that clean energy delivers.
