## **Opposition to Mission Rock Energy Center**

> A gas fired plant will increase the amounts of PM10, particulate matter directly tied to respiratory problems. The operation of the turbines and engine will release into the air toxic chemical substances including but not limited to Benzene and PHAs. These are harmful materials detrimental to public health and environmental health including soil, and water.

The shady connection between Limonera Company and Calpine is questionable.

The citizens of Santa Paula do NOT want an energy plant in their backyards.

The proposed design is like offering a model T Ford as a new car option.....this type of energy production is no longer feasible and to proposed building a gas operated plant is beyond ridiculous.

Please go away.
