¹ The Energy Commission appointed a Committee consisting of Karen Douglas, Commissioner and Presiding Member, and Janea A. Scott, Commissioner and Associate Member, at an Energy Commission Business Meeting on May 17, 2016. (TN 211537.)

Purpose of the Committee Conference

The Committee will conduct the Committee Conference for the primary purpose of deliberating in closed session on the issues presented by the Application. It may also address any then-pending motions or other requests that are ripe for consideration. The committee conference will be convened, public comment taken, and then the closed session will begin. The committee conference will reopen at the conclusion of the closed session to make any announcement of a required reportable action and to adjourn the committee conference. No oral argument will be taken.

Background

On December 30, 2015, Mission Rock Energy Center, LLC (Applicant) submitted an Application for Certification to the California Energy Commission (Energy Commission) seeking permission to construct and operate a 275-megawatt (MW) natural-gas-fired power generation facility: the Mission Rock Energy Center.²

The proposed Project would be sited on approximately 10 acres of land at 1025 Mission Rock Road in unincorporated Ventura County, approximately five miles west of downtown Santa Paula, California. The proposed Project site is located in an industrial park currently used for recreational vehicle and boat storage. Temporary construction laydown and parking facilities would be located north of the proposed Project site. Access to the proposed Project site would be via State Route 126.

The proposed Project would consist of five new General Electric Energy LM6000 PG (or equivalent) natural-gas-fired, combustion turbine generators with a combined nominal generation rating of 275 MW and associated auxiliaries. The proposed Project would also house 20 lithium-ion (and/or flow) batteries on site for electricity storage, providing an additional 25 MW of nominal capacity for up to four hours, and be enabled to provide voltage support to the electric grid.

The proposed Project would connect to the regional electrical grid at the Southern California Edison Santa Clara substation. To access this substation, the proposed projects requires the construction of a new 6.6-mile, 230 kilovolt (kV) transmission line.

Natural gas to operate the facility require the construction of a new 2.4-mile, 16-inch diameter pipeline that would connect to Southern California Gas Company's (SoCal Gas) existing high-pressure natural-gas transmission pipeline (Line 404/406). The new pipeline would run southwest from the proposed Project site along Shell Road and the Southern Pacific Railroad right-of-way.
