Docket Number: 15-AFC-02

Mission Rock Energy Center's Data Request Response Set 2A-134-153 Incomplete

On pages 10 and 11 of this response set, the applicant's response is incomplete. The first question asks about "Water for Construction". They plan no alternative supply for construction. The second question asks about the water supply for operation. The response indicates a backup supply for construction not operation as asked. They do not address the backup supply for operation. Please see screen shot of pages 10-11 from this response set. The Calpine response is incomplete and evasive and should be clarified.

Please see attached for details.

Additional submitted attachment is included below.

RE: Mission Rock Energy Center's Data Request Response Set 2A-134-153

On pages 10 and 11 of this response set, the applicant's response is incomplete. The first question asks about "Water for Construction". They plan no alternative supply for construction. The second question asks about the water supply for operation. The response indicates a backup supply for construction not operation as asked. They do not address the backup supply for operation. Please see screen shot of pages 10-11 from this response set. The Calpine response is incomplete and evasive and should be clarified.

Water for Construction

151. *Please clarify whether recycled water from Limoneira would be used for construction.*

Response: Yes, recycled water from Limoneira is intended to be used for construction water supply needs. The construction water requirements for MREC are very modest, estimated at 50 gallons per minute (gpm) (average use over one hour) intermittently used as needed primarily for dust suppression (AFC Section 5.15.1.7). Recycled water supply from Limoneira is a feasible supply for these limited construction needs.

Alternative Supply for Construction

152. *If recycled water from Limoneira is not available for construction, please identify an alternative supply and provide all information demonstrating there is an adequate supply available and the applicant has the necessary approvals to use the supply.*

Response: See the response to Data Request #151.

Supply for Operation

153. *Please provide information about any alternate or back-up source of recycled water and provide all information demonstrating there is an adequate and reliable supply available and the applicant has the necessary approvals to use the supply.*

Response: MREC intends to use Limoneira recycled water supply for construction, and is not seeking alternative sources of construction water at this time.
