## **Continue Operation of Diablo Canyon Plant**

Please consider favorably the continued operation of the Diablo Canyon power station. This is a useful and productive facility with a good record of safety and reliability. Generation of power at Diablo Canyon avoids emission of prodigious amounts of greenhouse gases, which would otherwise be generated by fossil fuel use, natural gas in particular. Natural gas use should be avoided because methane causes terrible harm to the atmosphere. Diablo Canyon has operated safely for many decades and has much useful life left. No one single person has been harmed by its operation. Please do not destroy this useful and productive facility, which contributes to reducing the effects of human activity in causing climate change.
