Dry Cask Storage

The NRC should have to be more proactive with its approach to SCEs PSDAR. The fact that the NRC does not approve or disapprove this minimalist approach to the safe storage of nuclear waste is very disappointing and alarming. Going forward with a plan that uses canisters that were designed for short-term storage does not make sense. Use the thick canisters, which are approved in Europe for long term storage. Thick canisters can be monitored effectively. Our lives and our property value, all we have, is at stake. NRC, take a stand for the rights of the people who rely on you to protect their health and safety. Insist that SCE use thick canisters for dry cask storage. They are the promised state of the art for safety.
