Diablo means clean air, improved environment, important tech

As an engineer and concerned environmentalist, we can't let California lose its only other nuclear power plant. With the loss of San Onofre, California power sector emissions went up 35%. If we lose the beautiful Diablo plant, California emissions will again be set to skyrocket.

In a country where asthma is the greatest risk to schoolchildren for hospitalization and missing school, where biodiversity is being destroyed due to contaminants, where we Californians are losing our sealife and oysters due to acidification, losing Diablo is the last thing we should do for our state, for our children, for the environment which depend on us as leaders for the US.

For the lower and middle classes, we also cannot afford further reliance on gas or imports, which puts us dangerously in harm's way should instabilities occur to the market.

We need to fully utilize and support this technical accomplishment and the source of a large portion of California's emission free energy. Please consider this letter of my support and the many others who care deeply about our health, our environment, and the air we breathe.
