Drought Response

Good Morning,

I was on the WET Program call last night and after the call I came up with a question that I forgot to ask. On slide #17, it says that access to energy and water billings/documentation and independent monitoring and verification for up to 3 years is required. If a property is not metered for electric or water, would installing a meter qualify for a grant or rebate? If not, is there any program that does provide some sort of financial benefit to meter and or sub-meter?

Thanks for the help,

Justin Prince
