Subject: Petition from thousands of parents in support of solar solutions plan for Aliso Canyon, LA Region

Please find attached a petition circulated by Climate Parents and signed by more than 2150 parents and clean energy supporters in support of a solar solutions plan for Los Angeles area customers served by the dangerous Aliso Canyon Natural Gas Storage Facility. [Climate Parents](#) is a national organization of parents and grandparents, based in California, advocating for strong clean energy solutions to climate change.

The record-breaking methane leak from Aliso Canyon was a climate and community disaster, and must never happen again. Increasing solar capacity quickly to reduce reliance on natural gas from the dangerous Aliso facility is a smart, sensible solution.

The petition calls on CPUC, the Aliso task force of agencies, utilities and legislators to adopt a practical [plan put forth by the Solar Energy Industries Association \(SEIA\)](#) to begin replacing polluting natural gas from the dangerous Aliso Canyon storage facility with clean solar energy for electricity generation. The plan outlines a number of actions to be taken this summer to accelerate solar projects in the area affected by the Aliso disaster, and to increase the amount of solar deployed in the area next year.

In the short-term, Climate Parents is urging CPUC to continue the Solar Photovoltaic Program to bring at least 10MW of new solar online in the area affected by a cutback in power generated by gas from the Aliso facility. Commissioners are set to vote to end the Solar Photovoltaic Program at the June 23 CPUC meeting after Southern California Edison failed to use the program's remaining capacity.

Other provisions of the SEIA solar solutions plan include improved interconnection rules to connect solar to the grid more efficiently, a short term removal of a cap on a solar-friendly electricity rate, the continuation of a Southern California Edison program for rooftop solar, and a number of steps for LA and other area governments to make permitting of projects more efficient.

Please feel free to contact me with any questions.

Sincerely,
John Friedrich

140. The Aliso Canyon debacle is additional proof that carbon-based energy must be phased out as quickly as possible -- and replaced with sustainable sources (such as solar, both photovoltaic and thermal, wind and geothermal). This site is well suited for solar energy capture and should be converted to that use.

489. Living in a region that is also fracked and has an air quality rating from the American Lung Association, I too have grave concerns that the country is taking for too long to switch to 100% renewable energy. This is a time for bold action to be taken in order to move away from carbon fuels that not just threaten us in the short term when disasters like the Aliso Canyon spill occur, but also for the long term health of the planet and all its inhabitants.

—**Christine Bryan**
Denton, TX

490. Mr. Weisenmiller - You have the opportunity to make history by turning a dangerous facility into a safe one with a forward-thinking plan that uses existing resources to generate more, and cleaner energy. Don't miss this chance!

1275. Now is the time to fully develop and implement environmentally clean, renewable energy sources and energy efficiency and to begin to reduce our usage of fossil fuels to zero as quickly as possible. Such measures will do more to effectively combat global climate change while simultaneously stimulating the U.S. economy than further development and usage of fossil fuels ever could.

1528. We know wind power works. We know hydro power works. Using solar power is just common sense. Even if we use up all the natural gas and coal, the sun is always there. Please, take the next step forward and start using solar power. It works.

1903. Danielle Callesen Charleston, SC	1922. Arleen Barber Redford, MI	1940. The risk of more Aliso Canyon disasters is directly proportional to the length of time required for California's utilities to transition away from gas-fired generators. The money to be saved by averting such blowouts, as well as the cumulative savings from day after day of not burning and leaking natural gas, far exceeds whatever expenditure is required for such solar expansion. — Jim Steitz Gatlinburg, TN

Milwaukie, OR

1945. I would like to tell the task force that we don't more Porter Ranch style incidents in the future because it hurts our environment & our children & some residents aren't allowed to go back because they're too scared. Plus we need to tell the SEIA that they must get away from fossil fuels so that the residents of Porter Ranch need to switch to renewable sources. If the residents of Porter Ranch want a future, then we better switch away from methane emissions & that Aliso Canyon has a cleaner & brighter future ahead so that they need cleaner & renewable technologies so that the planet is not at any stake.

2049. How many poisonous methane leaks will it take for us to deduce that natural gas is not exactly the perfect fuel we thought it was? "Natural" is not necessarily "good." Arsenic, hurricanes and lead are natural, but hardly beneficial. Go for solar and lead the way!
