Load Metering data collection efforts for Electric Vehicle Supply Equipment

Regarding Docket Number 16-OIR-03, Title 20 Data Collection Regulations Proposed Language

EVgo is supportive of the CEC's Load Metering data collection efforts for Electric Vehicle Supply Equipment. We recommend the CEC be more specific in some of the data parameter requirements listed under Section 1344 (h)

1. S, Z, and AA as follows:

S: provide the kW rating for each unit of equipment located at a given station

Z: include the organization that operates the infrastructure (if different from owner)

AA: ensure that the community served and the setting for each station is clear. E.g. i) residential, ii) private non-residential, iii) public including key sub-settings such as i) multiunit dwellings; ii) workplace, campus; and iii) urban, inner city, intra-city
