RPS Online System Comments

1. Make it clear when to use "Certify a precertified facility" as well as other application types. This can be done by including some text on the application page itself, or a bubble that appears as the mouse is hovering over each application type. This will help avoid applicants filling out the wrong application.
2. As an IOU, how can I see the status of generating facilities under contract with Southern California Edison? Is this done by having each counterparty add Southern California as an existing user? This feature would greatly help Southern California Edison.
3. For facilities which already have full certification status, what will be done for migration? How can Southern California Edison view all of the applications already completed and certified?
4. Under Notifications, there is an option for outgoing notifications, which I take to mean that applicants or an organization can send a message. How can I send an outgoing message? Also, perhaps change the tab to be Notifications/Messages
5. Page 44 of the RPS Training Manual " the red bubble is not on the "browse" button
6. The login page currently times out when left open, which results in the first login attempt to fail and return to the login page. It should be revised so that it does not time out.
