Subject: Carlsbad Energy Center - Concerns of a citizen

Hi

I am a long time Carlsbad resident and property owner in the vicinity of the proposed energy center. I ride my bike by the site several times a week along Highway 1 and Canon Rd.

Can you please clarify how you justify to increase the site from 23 acres to 30 acres which is an increase of over 30% and only increase the capacity from 540 MW to 632 MW which is less than a 17% increase in capacity.

Coastal land is very precious and so is energy but I do not get the point how you can go from 2 power blocks generating 540 MW on 23 acres to 6 power blocks generating 632 MW on 30 acres.

If anything there should be economies of scale and not the opposite.

Please advise.

A concerned citizen.

Daniel Zimmermann
