 07-AFC-06C Sarvey Exhibit Number 1 A14-07-009 Proposed decision of ALJ Yaknin.pdf (355K)

Hi Steve,

Attached is the 2014MW output numbers for the Encina Power Plant I received through a public records request to the CEC. I dont have the NOx numbers for 2014 but they can be extrapolated.

Encina	MW	NOx
2010	316,984	22.08
2011	474,369	32.29
2012	1,372,962	86.71
2013	483,815	33.11
2014	540,166	37.00 Estimate
Five year average		42.24 tpy of NOx emissions

Clearly 2012 is an outlier

The EPA lookback period 2013-2017 would result in a 35.06 tpy average for 2013, 2104

Also the CPUC has denied the Carlsbad PPTA so it looks as if construction will not begin this year and probably not until 2017 if the PPTA is approved. I have attached the CPUC proposed decision for your review. It confirms that even with the Carlsbad peakers there is still a 900 MW shortfall (Page 11 of 37 Line 1) in the San Diego LCR area as I stated in my comments meaning that the Encina Power Plants 950 MW will probably still be needed even with the Carlsbad Energy Center.

Thanks for your consideration and all the information you have provided.

Bob Sarvey
