To: Energy - Title24
Subject: T24 2019 - latest draft DR language

I'm concerned that the CEC has seemingly decided to specify which communication protocols can or must be used within the building interior. Please know that current Zigbee based control solutions are custom and proprietary implementations by each individual manufacturer of the Zigbee software stack. Every Zigbee lighting control solution currently on the market is different from its competitors and not interoperable.

Bluetooth Mesh (BLE) appears to be on track to become the de facto choice for multi-vendor, interoperable controls. This will help end users save money and have a broader choice of solutions.

Other solutions may appear as well over the requirements life. I strongly urge that a specific list of protocols not be named, or if named used for example only.

Russ

Russ,

Your email was sent to me as a comment relevant to our 2019 Standards. Do you object if we add this email to our 2019 Standards Rulemaking Docket? Alternately, would you prefer to docket a separate comment yourself?
