Re: Southern California Edison Company's Comments on the California Energy Commission Docket No. 17-IEPR-03: Workshop on Data Inputs and Assumptions for IEPR Modeling and Forecasting Activities

Dear Commissioner McAllister:

On February 22, 2017, the California Energy Commission (Energy Commission) held a workshop to discuss and solicit public comments on the key methods and assumptions the Energy Commission used in the forecast models for the 2017 Integrated Energy Policy Report (IEPR) Workshop (the Workshop).

Southern California Edison (SCE) participated in the Workshop and looks forward to working with the Energy Commission, and other utility stakeholders to address unresolved issues from the 2015 IEPR and the 2016 IEPR Update related to the Demand Forecast, including alternative methods for assessing weather normalization and peak period shifts.

SCE also looks forward to working with the Energy Commission and fellow stakeholders at upcoming Demand Analysis Working Group (DAWG) meetings –especially those related to Energy Efficiency, Transportation Electrification, and Distributed Generation. SCE hopes to collaborate with DAWG stakeholders to help improve understanding on the inputs, assumptions, and methodologies of the Transportation Energy demand models, Distributed Generation (DG) forecast, and other key energy items.

SCE appreciates the Energy Commission's consideration and looks forward to its continuing collaboration with the Energy Commission and stakeholders. As always, please contact me, at your convenience, at (916) 441-3979 with any questions or concerns.

Very truly yours,

/s/ Catherine Hackney
