### Purpose

The purpose of the workshop is to understand the range of perspectives concerning 10-year energy demand forecasts. At this workshop, the Committee expects the staff and

load serving entities (LSEs) to present their 10-year forecasts of electricity demand and consumption, and, where appropriate, natural gas end-use consumption, including discussion of the methods, data, and assumptions used to develop those forecasts. Parties who wish to propose alternative demand forecasts or to question the assumptions and methods of entities contributing demand forecasts should use this workshop as their opportunity to contribute to the record of the proceeding. In addition, staff will present estimates of the impacts of efficiency and conservation on historic and projected energy demand. Projected efficiency estimates include both committed impacts, from initiatives already finalized and approved, and uncommitted impacts, from initiatives likely to be implemented but not yet finalized or approved.

## Background

Energy Commission staff has developed forecasts of electricity and end-use natural gas consumption and peak electricity demand for each major utility planning area within California for the 10-year period, 2012-2022. These forecasts will be published in a staff report prior to the workshop. The staff's demand forecasts are prepared using Energy Commission forecast methods; they are not dependent on the LSE forecasts. To provide the Energy Commission and the public with the opportunity to consider alternative perspectives on demand trends, the Energy Commission requested electricity demand forecasts and related information from all LSEs with peak loads greater than 200 megawatts. These forecasts were submitted to the Energy Commission in April 2011. At the workshop, staff will present a comparison between its forecasts and the forecasts submitted by those LSEs.

Following the workshop, the Committee will provide direction to staff or LSEs concerning revisions to demand forecasts. The final forecasts will be used in a number of applications, including the *2012 IEPR Update*, the CPUC's 2012 procurement process, and the Energy Commission's electricity supply-demand assessments. The final forecasts will also be an input to the California Independent System Operator's controlled grid studies, other transmission planning studies, and the California Gas Report.

## Written Comments

Written comments on the meeting topics must be submitted by **5 p.m. on September 9, 2011**. Please include the docket number 11-IEP-1C and indicate *Demand Forecast* in the subject line or first paragraph of your comments.

**All filings in the IEPR proceeding may now be done electronically.** Please send your comments in either Microsoft Word format or as a Portable Document File (PDF) by electronic mail to [[docket@energy.state.ca.us](mailto:docket@energy.state.ca.us)] and copy the technical lead staff at [[ckavalec@energy.state.ca.us](mailto:ckavalec@energy.state.ca.us)] or send them on a Compact Disc to:
