Importance of both Central Power Grid and On-Site Distributed power

Would like to make the public officials aware that my book after the "recall" of Governor Davis, Agile Energy Systems (Jan 2004) about the CA energy crisis, has been asked to be updated by Elsevier Press to look at the same issues globally. The Global version will be out this summer. And the point that this Workshop needs to see and consider is the issues are still critical in CA but also the entire USA. Today, they are ALL global which the book focuses on. Now we must see the solutions as global too, especially in collaborating with Asia (China and Japan) plus the EU. I will try to be at the Meeting on 22 May in Diamond Bar. Woody
