Reliability?

Aliso Canyon has not proven itself to be reliable, for the sake of having "reliable energy." In fact, gas is not a reliable energy source, since it is finite in nature. It is not a renewable resource that we can count on to be there forever.

Please, be part of the future and help California transition to a renewable energy source. You think it'll affect jobs? Then transition the Oil Industry to jobs working with a renewable energy source. It'll affect jobs even more if we allow this to go on. More people will get sick from the toxic chemicals released every time a gas well blows and be unable to work. More people will lose their jobs in the near future because of oil becoming more and more scarce. So make it happen here and now.

Be an example for the rest of America, for the rest of the world.
