We don't need a manufactured energy crisis by SoCalGas

As a state regulator, I expect the CPUC to do its job and order SoCalGas to move their pipeline maintenance schedule to after the peak usage in winter OR to finish their pipeline maintenance before the winter peak. Residents of Porter Ranch are still getting sick and we need to focus on closing Aliso Canyon, not give SoCalGas excuses to reopen at full capacity.

With these pipelines not in use, there is a threat that gas shortages could happen which means more gas withdrawals from Aliso Canyon. This puts all of SoCal at risk of shortages PLUS it puts families who live near Aliso Canyon at risk!

Regulators must put people first, not private utilities and their shareholders!
