I SUPPORT HECA PROJECT

Dear California Energy Commission:

I wanted to write to you on behalf of the Hydrogen Energy California project and implore the need for its approval. HECA has been completely transparent through this whole process and have listened to resident concerns. This is not just about jobs and the economy, while important, but also approving a power plant that is clean and will help contribute to the growing California economy with much needed energy. On another issue, opponents argue that crops will be contaminated by coal, but that isn't true. HECA has completed public health modeling studies that prove nearby crops and soil won't be negatively affected. They've stated many times in interviews and at public meetings that they will cover the coal with surfactants to eliminate coal dust from falling. We've voiced our concerns and they've come up with creative solutions to resolve potential issues every time. I can say that I trust them and want to see this project built. Please approve and permit this project, thank you.
