## **HECA YES!!**

To whom it may concern,

I don't appreciate the opponents to HECA saying that HECA is a dirty power plant in regards to air quality. HECA's gonna use feedstock to produce clean, hydrogen-rich fuel. The project will produce both fertilizer and power and fertilizer with a low-carbon footprint when compared to traditional fossil fuels, including natural gas. Unlike most plants, HECA will capture and reuse about 3 million tons of CO2 per year through the enhanced oil recovery component. HECA has conducted comprehensive air quality and public health studies. These studies found that project emissions won't have significant adverse effects to public health or welfare. I think you should help HECA move forward by permitting the project.

Say yes to clean fuel, clean air and clean job!!!!

Julia
