Heca support

To whom it may concern,

Opponents say that HECA is a dirty power plant in regards to air quality. HECA will use feedstock to produce clean, hydrogen-rich fuel. The project will produce both fertilizer and power and fertilizer with a low-carbon footprint when compared to traditional fossil fuels, including natural gas. Unlike most plants, HECA will capture and reuse about 3 million tons of CO₂ per year through the enhanced oil recovery component. HECA has conducted comprehensive air quality and public health studies. The studies found that project emissions will not have significant adverse effects to public health or welfare. I am imploring that you please help HECA move forward by permitting the project.
