## **Support HECA**

California Energy,

I wanted to write in my support for HECA's use of the brackish water to be used for the plant. I think the fact that HECA is going to use dirty water for their power plant is a great idea because it gives use to something that was just taking up space before HECA came along. HECA has signed an agreement with the Buena Vista Water Storage District to purchase brackish, non-potable water. The difference between potable and non-potable water and basically non-potable water is dirty and not safe for human consumption or for farming but can be used for other things, like HECA. The water district welcomed HECA's use of the brackish water and has also said that it will actually help improve the quality of ground water for farmers. Please help HECA by permitting their project and allowing them to help stimulate our slowly recovering economy.

Thanks

Maria
