Air in our Lungs.

What is PM2.5? The microscopic size of soot, also known as fine particulate matter or PM2.5, allows it to lodge deep within the lung. Diesel vehicles and equipment and coal-fired power plants are among the biggest sources of this pollution. Particle pollution does not just make people die a few days earlier than they might otherwise—these are deaths that would not have occurred if the air were cleaner.

HECA, we don't want you here.

Respectfully,
Very Close Upset Neighbor
