## **Opposition to HECA - Petition**

*Additional submitted attachment is included below.*

We are opposed to the HECA project for several reasons: First, the project would provide very little, if any, energy for public consumption. Almost all of the electricity it generates will be used onsite, to make fertilizer or to allow Occidental Petroleum to pump and recover CO<sub>2</sub> for enhanced oil recovery. Second, there are lots of outstanding issues – waste, water, traffic, farmland loss, and others. And HECA is offsetting 462 tons of air pollution with questionable emission reduction credits from decades past, credits that will allow them to put these 462 tons of annual pollution back into our already dirty air. **Please reject the HECA project.**
