Hydrogen Energy Center Application--Docket #08-AFC-08A

This plant is a good idea, but in the wrong location!!!

The Southern San Joaquin Valley and Kern County in particular, for many different reasons is acknowledged as some of the worse air in the USA. The air in the proposed area does not have enough natural air movement to move any by products and any hint of air pollution from the area. It is a natural trap for pollution. Approving this application will add more difficulty to an already difficult problem.

Why not consider moving the plant to the Mojave Desert area of Kern County where there is more natural air movement and a railroad system to bring in the coal.

Air credits purchased (based on old informationf approximately 30 years ago) can still be used in Kern County and would not add to the pollution problem on the Valley floor.
