In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Ken Mowrey

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Nina Macdonald

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Glen Deardorff

While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Gillian Blair

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Ken & Janis Bates

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Greg Taylor

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Gustavo Sandoval

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Kevin Boner

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Hal Forsen

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Sandy Commons

While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Kristen Thorn

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Claudy Assalit

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Allen Rozelle

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Steve Walker  
14660 Hansel Ave

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Carol Tang

This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jan Hansen

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Patrice Summers

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

David Heenan

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Aimee Cheek

While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jeff Beck

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Arjo Heinsola

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jane Joba

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Gary Green

This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dave Garcia

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

William Swisher

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Sally Mackle

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Julia Howlett  
1055 N 2nd St

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Rob Shaw  
743 Balsam St

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Marie Ramirez

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.
