Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Karen Berger

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Paul Sinacore

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Alan Boon

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Alex Sonnenschein

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Kassie Owen

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Sarah Hafer

This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Deborah & Joe Santone

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jeffrey Goddard

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jeanne Michaels

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Katie Thomas

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Melvin Cheitlin

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Ronald Zampa

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Rita Mckissick

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Scott Teeman

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Shu-Chen Wu

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Celia Kutcher

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Mel Randall

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Margie Tomenko

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jerry Persky

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Joan Mortenson

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Janet Darrow

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Rob And Linda Seltzer

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Wren Osborn

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Christine Hayes

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Gene Kostruba

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Julie Wartell

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Robert Firmin

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jesse Agbayani

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Sandi Miller

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Ann Watrous

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Julie Crew

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Janet Smith

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Ken Lamance

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Cynthia Baer

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

William Rietzel

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jollen Gibbs

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Li Lovett

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Joe Weinstein

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Marian Houck  
212 N Valley St Unit 3

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Sarah Burress

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Lynn Learch

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Lenora Lowe

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

John Kraushaar

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Arlene Purcell

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Robert Daubert

This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Carol Hilton

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Margaret Palo

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Laura Strom

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Richard Wightman

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jana Harker

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Larry Steen

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dudley and Candace Campbell

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

P Beck

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Nancy Martin

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Krista Mahoney

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

David Perry

This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Trina Lopez

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Nancy Lund

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Patricia Schwab Rn

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.
