In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Mary Glazer

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Wendy Scott

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Holly Kurtz

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Currie Hambright

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Marc Rogers

While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Vicki Leidner

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jonathan Young

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Carol Ybarra

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jeff Topping

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Bruce Jackson  
3305 Ocean Dr

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Eric Rothchild

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Deirdre Brownell

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Gwynn O’Gara

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Michael Bliden

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Tama Becker-Varano

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Donald & Margaret Alter  
33 Linda Ave Apt 1711

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Philip Le Roux

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Ka Higgins

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Anita Emery

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Susan Church

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jeff Ellis

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Joseph Cancilla

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Darlene Lovell

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

David Morse

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Byron Fry

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Martha Patnode

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Carol Gold

This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Scott Saifer

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dan Cohen

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

David Comfort

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jude Todd

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Sue Alexander

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Filicity Kennedy

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Lynn Locher

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Ellen Frank

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Kenneth Tabachnick

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Paul Allen

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Mary Beth Robinson

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Karen Jacques

While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

West Smith

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Michelle West

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Fredrica Kanter

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Davis Montalvan

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Patricia Lauer

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Kathleen Kaiser

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Cyndi Kahn

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Patricia Scully

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Annie O’Dorisio

This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Matthew Ducey

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Joyce Stein

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Penelope Heintz

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Barbara Poland

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Barry Hottle

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Sieglind & Jeff Olson

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Austin Smith

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Kathleen Hees

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Janice Vrmeer

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Gerry Royse

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Taylor Cornish

This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Joan Teitler

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water.
