Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Wally Juchert

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Alfred Martinez

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Susan Jacobs

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Ana Black

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Mike McNickle

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Blaise Brockman

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Mary Lopez

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Rosalind Bresnahan

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Neil Cardew-Fanning

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Bob Stonebraker

This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Marsha Mcintire

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Norbert Beising

San Francisco, CA 94117-4358
Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Fujiko Yamashita

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Stacy Kamin

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Maxine Litwak

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Annie Hallatt

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Alisa Harrison

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Mardi Brick

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Marla Hanna

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Lauren Mason

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Arline Fernandez

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Robert Parker Stellato

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Timothy Larkin

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Stephanie Stone

This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Patricia Krommer

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Damon Brown

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

George Shea

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Ruth Cameron

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Lizzie Vierra

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Alberta Lesko

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Robert Latter

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Steve Conrad
382 Spruce Dr.
Lake Arrowhead, CA 92352
Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Marjorie Burnham

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

David Neiberger

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Laura Matyi

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Ian Griffith

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Julie Gall

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Kate Fields

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Glen Carlson

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Eithne Cunningham

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Andy Hou

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Karen Pitts

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Arthur Harding

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

PO Box 3012
Quincy, CA 95971-3012
Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

George Wood

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dawn Hoyt

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Patrick Lewis

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Frederick Wooley  
PO Box 13

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Helen Williamson

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Sarah Starr

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.  

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.  

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.  

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.  

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.  

Sincerely,  

Steve Santos  
1447 S Palmetto Ave

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Margery Jette

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

M Van Patten

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Lisa Garcia

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Stephanie Laszlo

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

John Carr

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Constantin Crontiris

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Spencer Baker

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant.
